SUMMARY

E-commerce operations and client support professional with 3+ years in client-facing technical roles. My main role at Markatty covers store operations, client relationships and troubleshooting, and extends into business and process analysis, customer experience and competitor research. Part-time, I design storefront themes and build their interfaces; I also designed and coded a bilingual client website on my own. Currently studying DevOps.

EXPERIENCE

E-commerce Operations & Client Support | NTG Clarity – Markatty, Cairo, Egypt *Mar 2025 – Present*

- Manage client relationships and run client meetings and follow-ups, including weekly review meetings with a pharmacy chain client.
- Help clients set up, configure and use their stores and dashboards; troubleshoot operational and platform issues and escalate real bugs to developers with clear documentation.
- Analyse recurring complaints, storefront usability and how work moves between Sales, Account Management, Operations and Development; propose clearer responsibilities and handovers to management.
- **Proposed CRM workflow & requirements:** defined the customer-lifecycle workflow and tracking requirements for Markatty's planned CRM (stages, owners, follow-ups, onboarding progress); I did not build the system.
- Compared Markatty with other e-commerce platforms (services, pricing, subscriptions, customer experience) and presented recommendations to management.

Frontend Development (Part-time) | NTG Clarity – Markatty, Cairo, Egypt *Mar 2025 – Present*

- Design pages and UX for storefront themes; write HTML, CSS and Tailwind and build React/Next.js components with AI assistance; review the code and test on desktop and mobile.
- Other developers handle the JavaScript business logic, API integration and publishing.

Account Manager | Dentolize – Dental Clinic Management System, Cairo, Egypt *Apr 2023 – Feb 2025*

- Managed clinic accounts and handled system issues by phone, AnyDesk remote sessions and on-site visits.
- Helped clinic teams adopt the system, and reported bugs to developers in detail until they were fixed.

SELECTED WORK

- **United World Foundation website** — client project delivered through Markatty: a bilingual English/Arabic site. I handled it on my own, from planning, structure and design to coding in Next.js, React and Tailwind CSS and testing, without AI assistance.
  Link: uwf-eg.org/en
- **Personal web projects** — self-initiated concepts such as a 3D car showroom, an architecture studio site and a bilingual grocery store. I planned and designed each one, guided the AI-assisted build, reviewed the code, tested it on desktop and mobile, and edited HTML and CSS myself.
